APA FAQ

What is APA?

APA stands for “American Psychological Association.” The APA is a professional organization for scholars in the social sciences. APA, just like other professional organizations—such as MLA*, CMS**, and others—establishes standards for the publication of articles in scholarly journals. When your teacher tells you to “use APA,” that means that you are to use the formatting guidelines established by the American Psychological Association.

* *Modern Language Association*

** *Chicago Manual of Style*

How do APA and MLA differ?

Obvious main differences are:

- 1) The list of sources is called “Works Cited” in MLA and “References” in APA.
- 2) MLA uses page numbers in the in-text citation, whereas APA uses year of publication.
- 3) The order and format of the items in the list of sources varies.

If you are used to MLA, work with a tutor to check over your APA documentation.

Where can I find APA guidelines?

Use this handout for the sources most often used by ACC students. For a more complete guide, use any college-level writer’s handbook. (If you don’t have one of your own, the library and the CRW have copies.) For the complete guide, use the official APA manual available at the ACC library.

What does it mean to “document” and to “cite”?

To document or cite means to acknowledge your sources of information. You must do this both within the text of your essay (**in-text citation**) and at the end of your essay (**the References page**).

When do I use in-text citation?

Whenever you **directly quote**, **summarize**, or **paraphrase** a source in your essay, you must cite it, usually just after the quote, summary, or paraphrase. You need to cite not only direct quotes, but also any ideas, theories, or designs not your own. You do not need to cite undisputed facts or your own observations.

What types of sources do I need to cite?

You need to cite books, articles, online sources, visual and audio materials, government documents, and primary research such as interviews, letters, and email messages. The pink page provides a partial list of sources you need to cite. Consult a handbook or ask a tutor if you have a source not on this list.

What types of sources do I not need to cite?

You do not need to cite your own ideas, theories, or designs; your own artwork, musical compositions, or recordings; information you gather through your own direct observation, surveys, or experiments; or facts that are universally acknowledged, such as dates. Be careful with this last one, though—many “facts” are not universally acknowledged.

What is a References page?

A References page lists in alphabetical order all the sources that you cited within the essay itself. It will be the last page of your paper. A sample References page can be found at the end of this guide (white pages).

What is a DOI?

A DOI is a “digital object identifier,” a number assigned to individual articles and book chapters so that they can reliably be located in online databases. Eventually, all articles will be assigned DOIs.

How do I use this guide?

THIS GUIDE IS DIVIDED INTO FOUR PARTS:

- I (green): general information
- II (pink): numbered list of types of sources
- III (yellow): examples of how to cite those sources, keyed to the numbered list
- IV (white): sample pages from a student paper

TO USE THIS GUIDE:

- 1) Find the type of source in the pink section. Note the number.
- 2) Turn to that number in the yellow section. There you will find two items. The first is the “**in-text citation**,” this shows you how to cite the source within the body of your paper.

The second is the “**References form**,” this shows you how to list the source on the References page.

- 3) Refer to the sample pages to see how the citations are used in the context of a real essay.

PLEASE NOTE:

- ① This guide lists **just the most common sources** used in college papers. If you have a source that is not on this list, consult a writer’s handbook or the official APA guide, or ask a writing center tutor, a librarian, or your teacher for help.
- ② We had room for only **a limited number of examples**. If the example does not conform to your source, please ask a writing center tutor for help.
- ③ The **number and kinds of online sources** increase each year. Handbooks try to keep up, but guidelines for citing online sources vary somewhat from one handbook to another and from one year to the next. Guidelines for the online sources in this handout have been checked against several handbooks, but may change next year.

Types of Sources

23. article from a database or literary archive on the Web
24. material from a Web site
25. annual report
26. journal article with a Digital Object Identifier (DOI)
27. journal article without a DOI

Advice on formatting the in-text and References page items:

APA is just different enough from MLA to be really annoying for students (and teachers). To be safe, work with a tutor in the Center for Reading & Writing when you are ready to document your sources.

In general, APA uses:

- ◆ publication dates rather than page numbers (page numbers only with direct quotes)
- ◆ initials rather than first names of authors
- ◆ “sentence case” for titles
- ◆ italics rather than underlining for titles of books and periodicals

ONLINE SOURCES

NOTE: Many online sources can be treated as if they were magazine articles; that is, you need to cite the same kinds of information in approximately the same order. For example, a References entry for a typical web page will have six basic parts, in this order:

- 1) **Author's name**, if there is one. The author can be a person or an organization.
- 2) **Year of publication**. This date should be the original publication, if the text has an earlier print version, or the date of its posting to the website, if the text does not).
- 3) **Title of the specific page or layer** that you are using.
- 4) **Title of the main or home page**.
- 5) **Date you retrieved the information**.
- 6) **Entire URL** (address) of the specific page you are citing.

Breaking through the Glass Ceiling:

Women in the Executive Workforce

Beverly Murphy

SUNY Adirondack

Abstract

Despite the assumption that the feminist movement resolved all the problems in equity in the workplace, women executives are still rare. Reasons for this inequitable ratio are many, and vary from source to source, yet nearly every female executive has pointed to the corporate culture as creating a so-called "glass ceiling" that promulgates the idea of equality while, at the same time, women are repeatedly denied promotions.

women are still rare in the highest executive positions, representing only about 2 percent of the top executives in *Fortune* 500 companies in 1990 (Solomon, 1990). Pave (1986) notes that "no one cites 'equal numbers of men and women in top management positions' as the mark of a good company for women" (p. 76). Despite women's persistence, a "glass ceiling," or invisible barrier, continues to separate women in middle and upper management from positions in top management. If women are ever to break through the glass ceiling, business attitudes have to change, particularly the definition of successful management style.

The main reason women have not broken through the glass ceiling is that they are women (Robinson, 1998). They face resistance from male executives who want their successors to be just like themselves and who therefore will not consider women for top-management positions, or they face resistance from men who do not want women to be executives (Pave, 1986). According to Felice Schwartz (1987), president of Catalyst, a firm that conducts research on corporate women, "It goes against the grain of most senior executives to encourage and welcome the women, so unlike their wives, who put career before marriage and rearing children" (p. 185). Thus, some women are held back if they behave too much like women, while others are held back because they behave too much like men.
